PROFIL

I am a junior JavaScript developer passionate about crafting aesthetically pleasing and functional web applications. I have experience working with frontend tools such as React, TypeScript, SASS, and Styled Components. I am currently learning Angular. In my spare time, I am dedicated to expanding my skill set by learning new technologies.

A 6-month in-person PHP programming course, where I learned, among other things:

- ✓ Introduction to PHP, HTML, CSS, XML
- ✓ MySQL, Postgres, Diagramy ERD, UML
- ✓ Object-Oriented Programming in JavaScript

PROJECTS

Portfolio [React]

https://github.com/majcherrr87/newPortfolio
https://majcher.netlify.app/

The portfolio application was built using the React library. It provides more information about me, showcases completed projects, and allows users to send me an email.

Head Hunter [NestJS React TypeScript]

https://github.com/tomczer2t/head_hunter_front
https://github.com/tomczer2t/head_hunter_back

The Head Hunter project is the final stage of a year-long Full Stack JS Bootcamp, developed in a Scrum framework by a team of six. The application integrates all the knowledge and technologies we learned during the bootcamp. It was created to connect future developers with recruiters.

Email Orders [Express React TypeScript]

https://github.com/majcherrr87/zamowienia_email_front
https://github.com/majcherrr87/zamowienia_email_back

The Email Orders project was created for a restaurant's needs. The application allows users to create a database of suppliers and assign products to them, and then place orders via email.
